

Bankruptcy

How to pick a winning investment

By the Three Wolf Moon of Wall Street
Binita, Juan, and Faye

Table of contents

01

Objective

Why a better classification model matters for investors

02

The dataset and its trends

A collection of annual company data features and their bankruptcy status

03

Random Forest

How we trained and evaluated a prediction model

04

XGBoost

Compare performance to Random Forest

05

SVM and NN models

Evaluate alternative prediction models

06

Recommendations

Model comparison and key findings

Introduction to macroeconomics

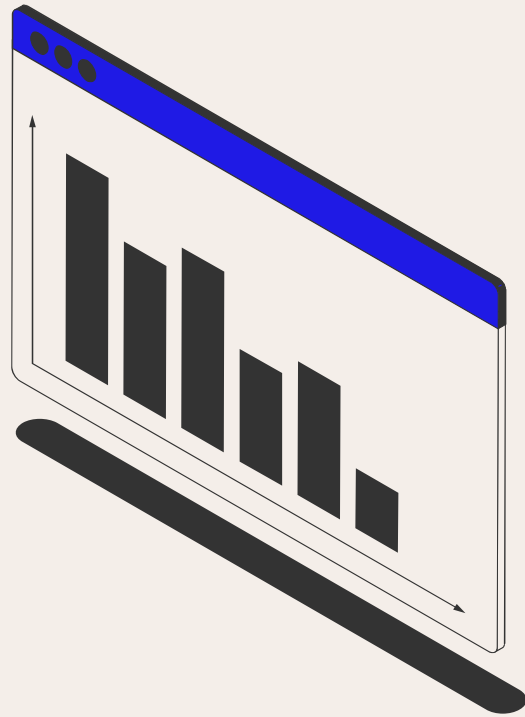

You can give a brief description of the topic you want to talk about here. For example, if you want to talk about Mercury, you can say that it's the smallest planet in the entire Solar System

01

Introduction to history

You can enter a subtitle here if you need it

History of **macroeconomics**

1933

Start

Earth is the third planet from the Sun

1950

Evolution

Despite being red, Mars is a cold place

1970

Inflation

Jupiter is a gas giant and is very big

1980

Balance

Saturn was named after a Roman god

Welcome to **macroeconomics!**

Do you know what helps you make your point crystal clear?

Lists like this one:

- They're simple
- You can organize your ideas clearly
- You'll never forget to buy milk!

And the most important thing: the audience won't miss the point of your presentation

Macro vs **micro**

Macroeconomics

Venus has a beautiful name and is the second planet from the Sun. It's terribly hot, even hotter than Mercury

Microeconomics

Earth is the third planet from the Sun and the only one that harbors life in the Solar System. This is where we all live

Government **policies**

Fiscal

Mercury is the closest planet to the Sun

Monetary

Venus is the second planet from the Sun

Exchange rate

Neptune is the farthest planet from the Sun
